Leather collection
Leather - a lover’s material

Leather and seating furniture - a combination with a long tradition that has always stood for high standards and selected taste. Leather is resistant, durable and robust. As a purely natural product, different grain patterns and irregularities such as tick bites, scars or abrasion marks are part of the individual characteristics of every animal skin. It is therefore not a flaw or reason for complaint, but much more a seal of quality and „certificate of authenticity“. Especially with high-quality aniline leathers like our Ranchero, these marks contribute to the fascinating liveliness of the material. With leveled leathers, such as our Object or Atlantic, these characteristics are less pronounced. What they all have in common is that their low-emission mineral tanning has earned them the „Blauer Engel“ certificate for special protection of people and the environment.

The patterns printed in this overview are for orientation purposes. Colour deviations may occur. We recommend requesting an original sample before placing an order.
